

Amendments to the Specification

Please amend the above-identified application as follows:

Please delete the paragraph beginning at page 1, line 29 and ending at page 2, line 8 and replace it with the following:

91 Typically, a user manually adds or pairs a processing device to a Bluetooth™ short distance wireless network. There are several ways to add a processing device to a Bluetooth™ short distance wireless network. A user may select a “discover” mode, in for example a cellular telephone having Bluetooth™ capability, for finding other nearby Bluetooth™ devices. The cellular telephone then proceeds to find other possible Bluetooth™ device to be paired with the cellular telephone. Often, the discovered devices are then provided in the form of a list to the user who may then select the desired device, such as a laptop computer, to be paired with the cellular telephone. The user then may be prompted for a security code or Personal Identification Code Number (“PIN”) or passkey on the cellular telephone display. A user then may enter the appropriate PIN. Likewise, the discovered device prompts the user for a PIN that may be entered. Bluetooth™ technology then establishes a communication channel between the processing devices.
